

Specifying a Natural Cubic Spline

Christian A. Maino Vieytes

May 9, 2023

Using splines in regression contexts has become a popular method for flexibly modeling exposure-outcome relationships in epidemiological studies^{1,2}

```

#Calculate CE for each counterparty
Value.A <- data.frame() #MTM value of each contract within cp A
# ...
for(i in 1:length(foo)){
  if(isTrue(as.character(portfolio_data[i,1])=="A")==TRUE){
    # ...
  }
}

```
